

Instructions on how to insert SIM card in the CALMS device

For CAL-EDGE-8

1. Unscrew the screws on both sides of the device

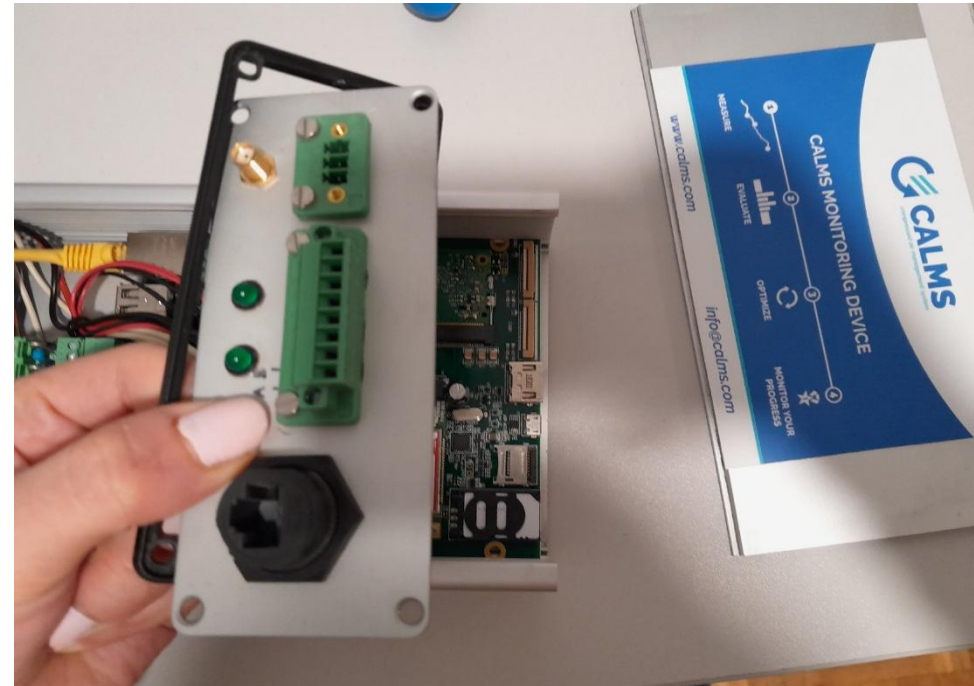

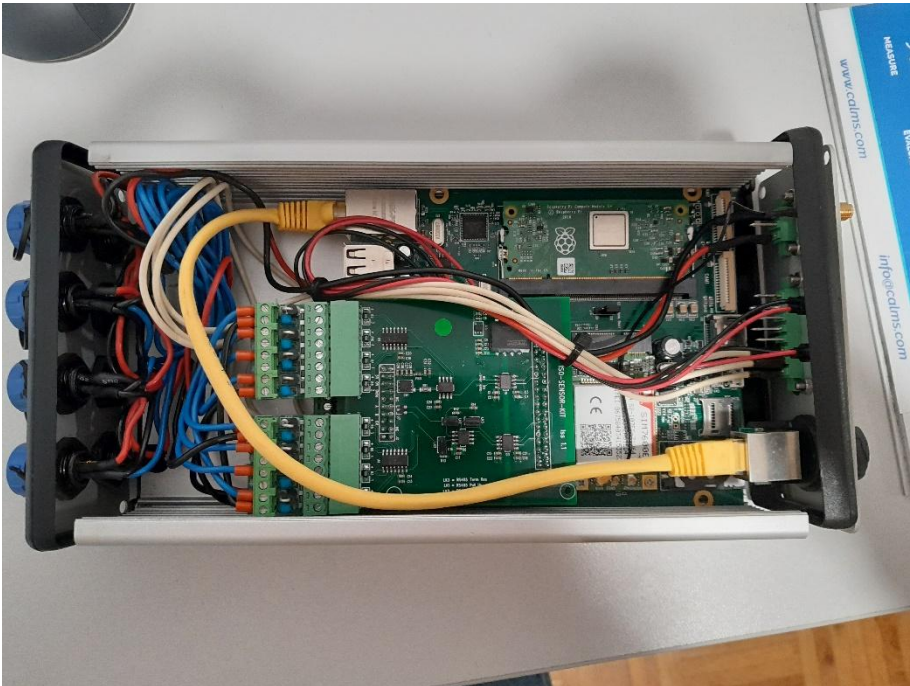

2. Carefully take out the unscrewed parts

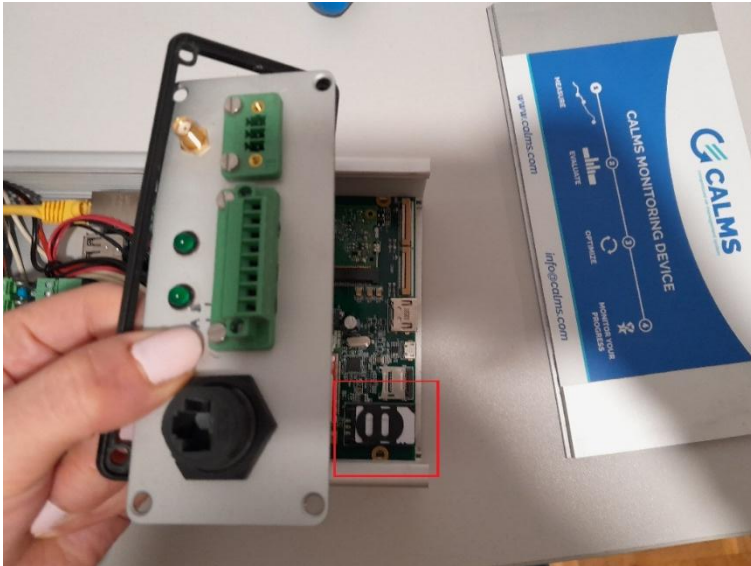

3. Carefully remove the metal lid by sliding it left or right

4. Carefully, without damaging the wiring, lift up the left side of the device

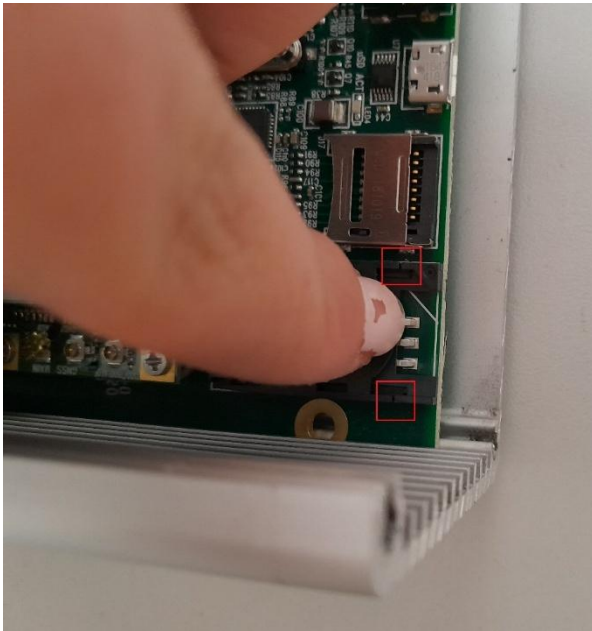

5. The marked place is where you should insert your SIM card

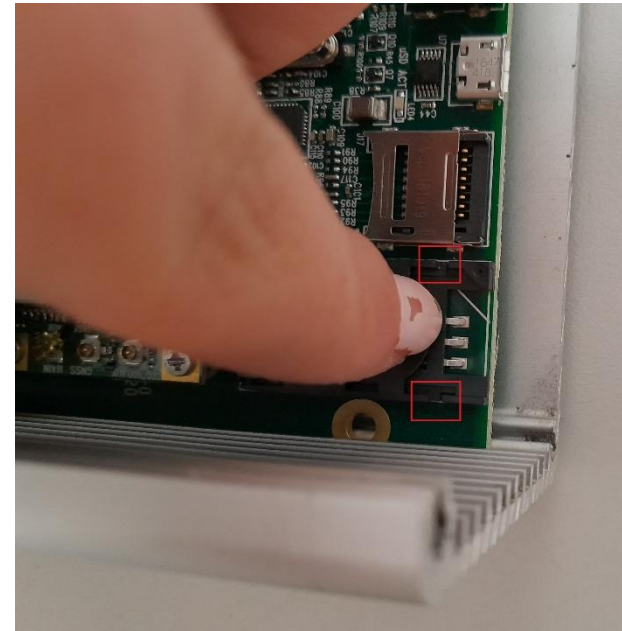

In your device that slot should be empty.

6. First, to insert your SIM card, you must move the slot for the card to the left

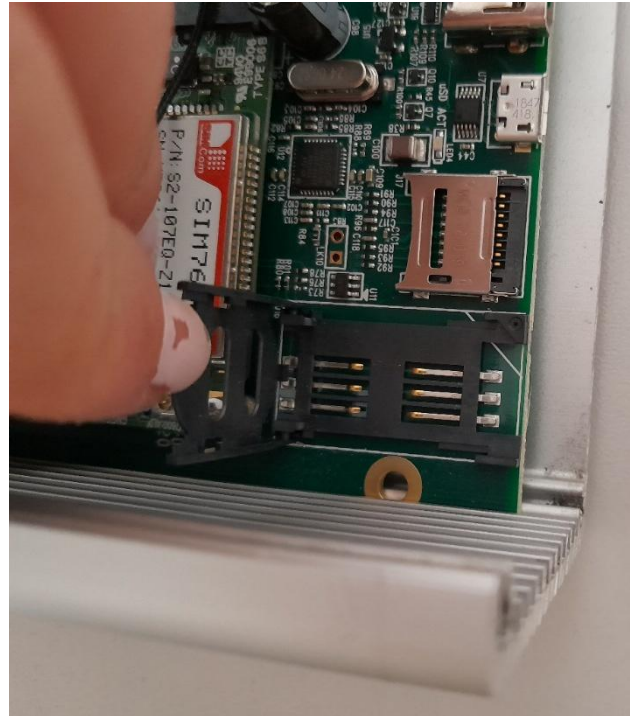

Not moved to the left

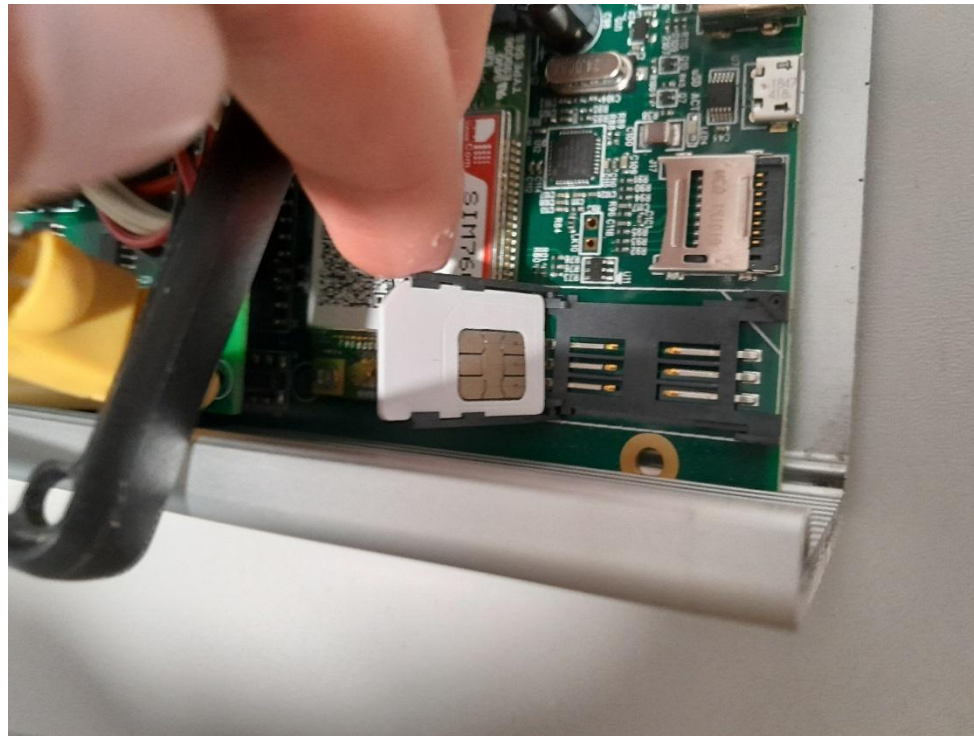

Moved to the left

7. If you have done it correctly, you should be able to lift the black lid up

8. Insert your SIM card in the device like shown in the photo below (be careful to insert it the right way)

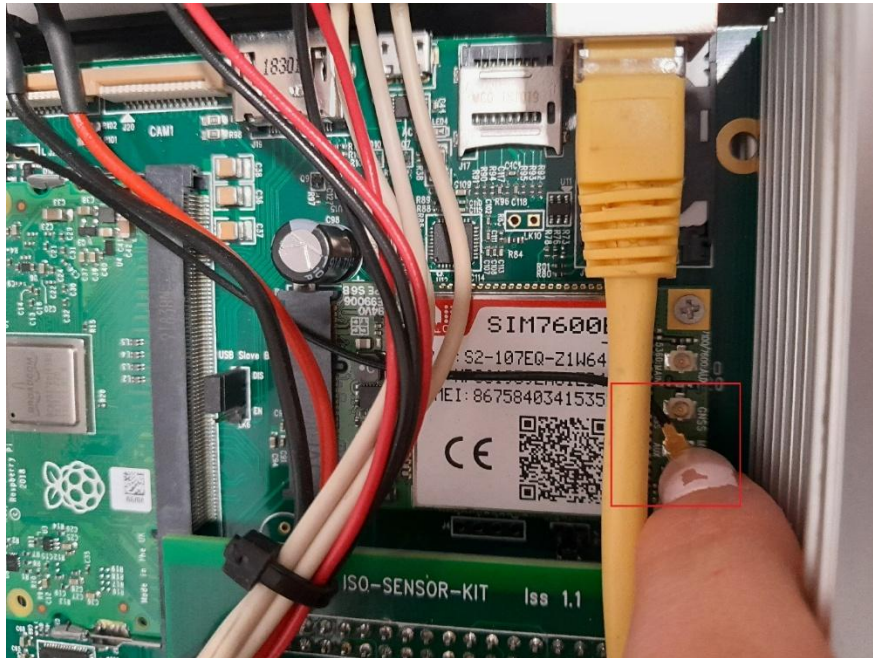

9. Close the black lid with your SIM card and it is very important to now secure the card by sliding the black slot again now to your right.

You will know if you have done it correctly if you are no longer able to lift the black lid up and the card is secured in its place.

10. Check if the wirings have not (accidentally) been loosened.

The antenna wire can sometimes be sensitive and it is strongly recommended to press it gently to just make sure it is secured.

11. When this is done you can now carefully put back the parts of the device.

Firstly, slide the lid back, put back the parts and screw them to the device.

Disclaimer: CALMS cannot provide any additional support regarding device connectivity if custom SIM card is used.

In case the customer wants to use custom SIM card in the CAL-EDGE-8, changes in device settings need to be made.
